BUSKRO · VACUUM TRANSPORT BASES

BK7IB
Transport Base

Capable of handling materials ranging from CR80 cards to A3 page format

Available in 3 Belt, 4 Belt and double Wide Belt configurations, with optional left or right direction of travel

Ideal for transporting flat substrates of varying thickness including direct mail and packaging materials

RECESSED BELTS WITH AN EVEN-FLOW VACUUM SYSTEM

Overview

Buskro offers three distinct 7IB inline transport bases tailored to diverse printing needs. These bases include a 3-belt, 4-belt, and double wide belt transport, each varying in belt number and size. Key features across all models include recessed belts with an even-flow vacuum system, aluminum side extrusions for hardware mounting, and spring-loaded rollers for precise material handling. These transport bases are designed to operate inline with other integrated devices, or offline as a complete standalone system.

Building on over 20 years of proven performance and experience, BUSKRO has expanded its suite of BK7IB transport bases to include three models: 3-belt, 4-belt, and 2-wide belt configuration, offering added choice from an economical entry-level model, to a premium wide-belt unit designed to handle heavy and difficult materials.

The reliable BK7IB print platform forms the foundation from which an entire system can be built upon by adding accessories such as infeed (ramped) and outfeed extension tables, feeders, waste bin, and delivery conveyors. Convenient side extrusion rails allow for print heads, LED curing lamps, and third-party devices such as cameras and barcode readers to be easily mounted and added.

Belt Inline Base

Ideal for robust centre line detection of all product sizes and conveyance of larger products. This product may require a ramp-up table depending on the material being transported.

Wide Belt Inline Base

The maximum belt coverage is ideal for transporting large products, when smooth conveyance of all products and centre line detection is required. Utilizing this transport base eliminates the requirement of a ramp-up table.

MATERIALS	CONFIGURATIONS	DIRECTION OF TRAVEL	HARDWARE MOUNTING
CR80 cards to A3 page format	3-belt, 4-belt, and double wide belt	optional left or right	aluminum side extrusions
